

The Missing Piece.

Honour LEGO's core - connection, imagination, creation.

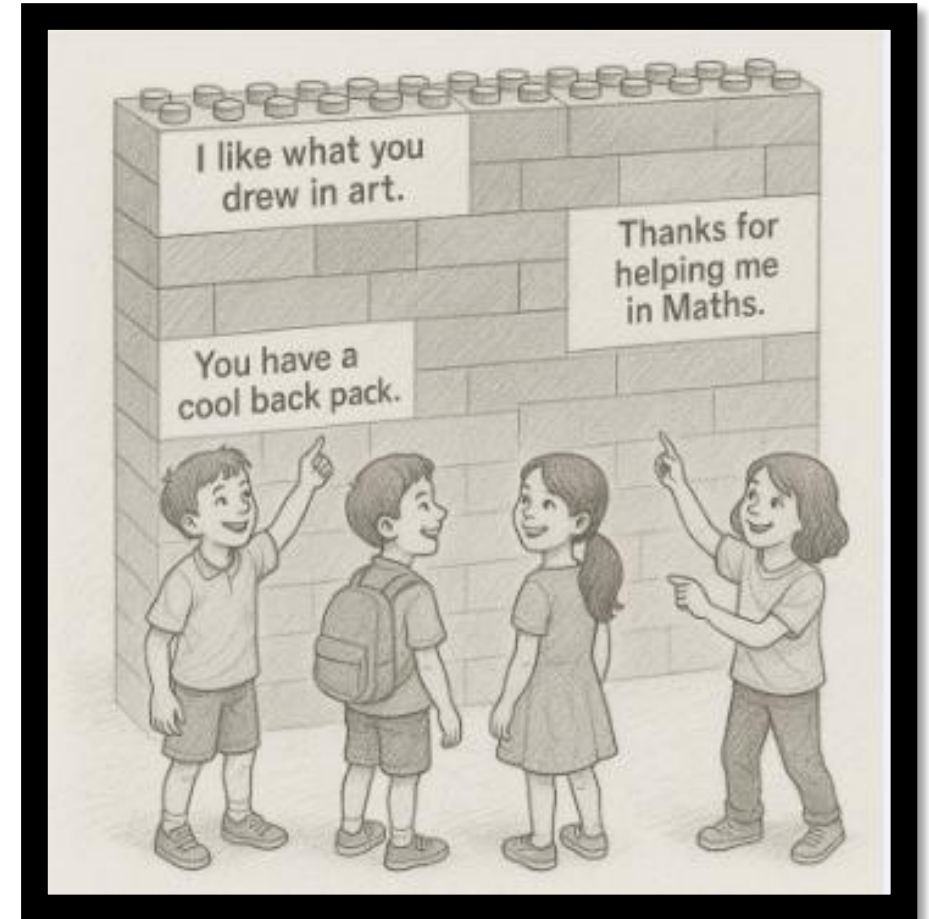

LEGO releases bespoke school kits with a missing piece, which can be found in another kit. To complete their build, kids must collaborate, plan, and share - a playful way to practice soft skills like teamwork and engagement, and a powerful metaphor for coming together to create something whole.

The Build Up.

Encourage kids to engage with new peers through compliments.

Students write a message to their new class buddy on a life-sized LEGO brick, which they then add to a “class wall”. It’s a hands-on way to teach kids how to build each other up with words and actions.

The LEGO Lobbyist.

Add tangible value to the curriculum.

While the Australian Curriculum lists soft skill requirements for students like teamwork, critical thinking, and ethical understanding, it lacks any formal lesson plans. LEGO lobbies to embed lesson plans aligned with these capabilities into the curriculum, giving teachers official resources for teaching soft skills.
